

Python multiversion v openSUSE

March 2021

Matěj Cepl
SUSE

```
1 %?!python_module:%define python_module() python-%{**} python3-%{**}}
2 Name: python-foobar
3 Version: 1.0.2
4 Release: 0
5 Summary: Example foobar package
6 License: MIT
7 URL: https://github.com/bumba/foobar
8 Source: https://files.pythonhosted.org/packages/source/s/foobar/foobar-%{version}.zip
9 # PATCH-FIX-UPSTREAM remove_mock.patch bsc#123456 mcepl@suse.com
10 # we don't need stinking mock
11 Patch0: remove_mock.patch
12 BuildRequires: %{python_module appdirs}
13 BuildRequires: %{python_module pytest}
14 BuildRequires: fdupes
15 BuildRequires: python-rpm-macros
16 Requires: python-appdirs
17 BuildArch: noarch
18 %python_subpackages
19
20 %description
21 foobar is a collection of enhancements to the Python packages that
22 allow you to build and distribute Python packages,
23
24 %prep
25 %autosetup -p1 -n foobar-%{version}
26
27 %build
28 %python_build
29
30 %install
31 %python_install
32 %python_expand %fdupes %{buildroot}%{$python_sitelib}
33
34 %check
35 %pytest -k
36
37 %files %{python_files}
38 %license LICENSE
39 %doc CHANGES.rst README.rst
40 %{_bindir}/foobar
41 %{python_sitelib}/foobar
42 %{python_sitelib}/foobar-%{version}-py%{python_version}.egg-info
43
44 %changelog
```

Děkuji!
